Fort Worth Star-Telegram

Faulty bar codes force extra work to count ballots

BY BRIAN LOPEZ AND GORDON DICKSON
blopez@star-telegram.com
gdickson@star-telegram.com

FORT WORTH

About one-third of Tarrant County mail-in ballots have been rejected by computer scanners because the bar codes are not legible, but the votes will still be counted, election administrator Heider Garcia told county commissioners on Tuesday.

The county's state-approved print shop is not making the bar codes 100% scannable, Garcia said.

The county's ballot board will have to copy the mail-in ballots into new ones and scan them, Garcia said. If about 60,000 mail-in ballots get returned, Garcia expects about 20,000 of those will need to be redone by the ballot board.

Garcia said this isn't a new issue. In the past, people might have damaged the bar code themselves and the ballot board would need to redo the ballot, but this year the sheer volume is concerning. But Garcia assured that staff will work around the clock so votes can be counted on Election Day.

"We believe we have enough time and resources to do this," he said.

The Republican, Democrat and Libertarian parties have collectively submitted 89 names of Tarrant County residents who can serve on the county's ballot board.

Board members work in pairs, and each member must be from a different political party.

Pairs look at the returned mail-in ballots one at a time and, if both members agree that the ballot is in proper condition,

August trial likely for ex-officer charged with murder

BY EMERSON CLARRIDGE
eclarridge@star-telegram.com

A state district judge on Tuesday set a tentative window for the trial for a former Fort Worth police officer indicted on a murder charge in the death of a woman he shot as he and another officer handled an open structure call.

Aaron Dean

Judge David Hagerman said during a pretrial proceeding that although scheduling in the case will be fluid and may change, the trial for Aaron Dean will likely be held in August. The judge did not select a date for voir dire, when about 200 potential jurors will be culled to a smaller panel that will consider evidence in the case.

The novel coronavirus and connected social distancing measures have for months delayed legal affairs and spurred logistics complications for jury trials in courthouses across the state, including in 297th District Court, where Dean's case is being handled. Potential jurors may spill beyond a single room on the fifth floor of the Tim Curry Criminal Justice Center in downtown Fort Worth.

The case "needs to be tried next year," Hagerman said.

The judge said he would likely consider a motion for a change of venue, which would seek a transfer of the trial outside Tarrant County,

Environmental groups, particularly the Great Plains Restoration Council, want Fort Worth to protect and manage native prairie land like the tract of more than 900 acres near Crowley, Lake Benbrook and the new Tarleton State campus in southwest Fort Worth.

Fort Worth moves forward with land conservation plans

BY HALEY SAMSEL
hsamsel@star-telegram.com

The land development boom in North Texas has shown no signs of slowing down, even with the significant economic challenges posed by COVID-19. That's why Fort Worth officials are moving forward with plans to identify and potentially acquire natural areas for preservation before developers buy up the land for housing and retail projects.

"We want to really protect these key areas for our future generations, since once it's gone, you can't get it back," said Jennifer Dyke, a city stormwater program manager who has led Fort Worth's conservation efforts. "We really feel that open space conservation can help the city be more liveable for our community."

> "WE REALLY FEEL THAT OPEN SPACE CONSERVATION CAN HELP THE CITY BE MORE LIVEABLE FOR OUR COMMUNITY.
>
> *Jennifer Dyke, a city stormwater program manager who has led Fort Worth's conservation efforts*

The Open Space Conservation Program, a partnership between the city and the nonprofit organization Trust for Public Land, was originally launched late last year amid growing concerns over Fort Worth's loss of an estimated 2,800 acres of natural prairie per year to development, among other issues.

Using money from the city's oil and gas trust fund as well as $64,000 in donations from residents, the program made its first purchase in June from energy company Total with the acquisition of Broadcast Hill, a 50-plus acre property near the Tandy Hills Natural Area in east Fort Worth.

Future acquisitions are likely to be funded through a mixture of revenue from grants, the oil and gas trust and Fort Worth's 2022 bond program, Dyke said. Starting on Dec. 1, City Council

Merged Contango, Mid-Con oil and gas firms will be based in Fort Worth

BY GORDON DICKSON
gdickson@star-telegram.com

FORT WORTH

Two oil and gas exploration and production companies are merging to form a single entity that will be based in Fort Worth.

Houston's Contango Oil & Gas Co. and Tulsa's Mid-Con Energy Partners LP announced the merger this week. The all-stock deal is expected to close later this year or in early 2021.

Contango has about 200 employees, most of them doing field work at oil and gas exploration sites in Texas, Oklahoma and Wyoming. Mid-Con also has operations in Oklahoma and Wyoming.

The merger is the latest example of oil and gas companies looking for ways to consolidate and find efficiencies, to ride out a dramatic downturn in the industry that is likely to continue for several more years.

"Our focus is on acquisition, versus organic development," Wilkie Colyer, Contango chief executive officer, said in a phone interview. "Our view is the entire market really needs to consolidate. Our goal is to be the consolidator of oil and gas assets, to run them more efficiently at the bottom of the cycle."

CONSERVATION

members can vote on the disbursement of up to $16 million from the oil and gas fund for natural area acquisitions, she said.

For now, Open Space leaders are seeking public feedback through an online survey in English and Spanish that will close at the end of November, Dyke said. The group held its first public meeting last week and met virtually with leaders of environmental organizations and nonprofits across Fort Worth earlier in October.

Results from the survey, which asks Fort Worth residents about their support for a permanent preservation program and how they would like natural areas to be used, will inform the Trust for Public Land's development of a tool that uses computer mapping and other data to help the city prioritize which properties it should pursue for conservation, Dyke said.

"They can rank the order of priority for those different benefits of open space, like flood control, ecosystem preparation, recreation, equity, community health, water quality," Dyke said. "What the community has to say about what they feel is important will help us prioritize which parcels we think need to be conserved."

When the program launched last winter, the Star-Telegram reported that three areas were being floated as the top candidates for preservation: the west shore of Lake Arlington, Sycamore Creek and parts of the Mary's Creek watershed. The Open Spaces program has a list of potential properties, Dyke said, but leaders are not actively pursuing acquisitions while the Trust for Public Land tool is in development.

Jarid Manos, who founded the ecology-focused Great Plains Restoration Council in 1997, recently joined the group of environmental leaders providing feedback on the Open Spaces program. He hopes that the city's newfound commitment to conservation may extend to his long-term project: the Fort Worth Prairie Park, a plot of 944 acres near Crowley, Lake Benbrook and Tarleton State's new campus, which opened last year.

Having worked on the prairie park since at least the mid-2000s, Manos' dreams for the area have evolved as developers and owners have bought parts of the prairie, including the Texas General Land Office's sale of 2,000 acres to a developer in 2013.

The Fort Worth prairie ecosystem, made up of native tallgrass, is one of the most endangered in North America, Manos said, and he wants the city to take a more active role in ensuring that this small remnant is preserved.

"They say Fort Worth is where the west begins, and if we don't see some of those big wide open spaces preserved, it will be where the concrete never ends," Manos said. "There's still a large section of this prairie left, so preserving this ahead of time with foresight would allow native wildlife and people to thrive."

Open Spaces leaders plan to meet at least twice more with environmental leaders by the end of next summer, Dyke said. Eventually, once the prioritization tool is developed, the Trust for Public Land will pass on management of the data to the city's IT department, and Fort Worth officials can use it to figure out future acquisitions over the next several years, she said.

The Trust for Public Land will also release a policy report next June providing recommendations on how to manage the program in the long term and examples from other cities that are preserving nature areas, including Oklahoma City and Charlotte.

"We'll find out: How do we maintain these properties and manage them appropriately for the natural resources that are out there?" Dyke said. "Should the city have policies that incentivize open space conservation? I think, really, it will be up to the city to figure out: How do we want to move forward as a city?"

Courtesy of Jarid Manos

A group enjoys prairie land near southwest Fort Worth that has since been sold to a developer. Some environmental groups hope the city's plan to buy land for conservation will include a tract of prairie near Lake Benbrook and the Chisholm Trail Parkway.

Zeta swirls north on path to hit New Orleans

BY GABRIEL ALCOCER
Associated Press

CANCUN, MEXICO

Storm-weary Louisiana is once again under a hurricane warning, with Zeta leaving Mexico's Yucatan Peninsula on a path that could hit New Orleans Wednesday night.

Zeta, the 27th named storm in a very busy Atlantic season, made landfall as a hurricane just north of the ancient Mayan city of Tulum with maximum sustained winds of 80 mph. It weakened to a tropical storm as it crossed over land, but it was expected to regain strength over the Gulf of Mexico.

Zeta's top winds were 65 mph Tuesday, and it was centered about 520 miles south of the mouth of the Mississippi River just off the Yucatan Peninsula. If Zeta makes landfall in Louisiana, it will be the fifth named storm to hit the state this year, joining Cristobal, Laura, Marco and Delta.

Zeta was drenching the northern Yucatan.

Quintana Roo state Gov. Carlos Joaquin said via Twitter early Tuesday that early reports indicated his state suffered no major damage, nor were there reports of deaths or injuries.
